Esta is a commodity trading company. Our contribution to the global environmental strategy starts already from our participation in the recycling commodity supply chain as the trader.

We recognize that our operations have the potential to impact the environment. Our environmental strategy is based on the minimization of the adverse impact on the natural environment and management of climate change issues. For this, we measure our impact and set the goals to reduce it to meet the expectations of our stakeholders: suppliers, customers, banks, and government.

The key point is that our business is informed on our environmental strategy and considers it making its decisions. Such as Esta's emissions associated with the transportation: we shift from road to rail where it is possible.

Esta ensures that personnel are aware of the environmental strategy through the delivery of ongoing training and internal communications. Specifically, we aim to keep the following:

- Provide information, instruction and training regarding methods of work which ensure environmental best practice;
- Identify and provide effective control of risks to the environment showing our commitment to the protection of the environment and prevention of pollution;
- Ensure that suitable and sufficient resources are provided for effective supervision, responsible management, and positive leadership at all levels of the organization;
- Ensure there are requirements for our own people and third parties working for us to adhere to our environmental management systems;
- Ensure the ongoing monitoring and review of our environmental performance to enable achievement of our objectives and targets;
- Ensure that all applicable legal compliance obligations and other requirements to which we subscribe are complied with;
- Hold regular reviews of our policy, systems and practices to ensure continual improvement in our environmental management system and enhance our environmental performance.
